

Team story_nani

Joan Chirinos, Soojin Choi, Raunak Chowdhury, Anton Danylenko

Core Fxnality

- Landing Page
 - Logins
 - Register
- Logout button
- Home Page
 - Links to all of the stories that the user has contributed to
 - Buttons to create new story or add to existing
- Create new story
 - Create title
 - Submit first paragraph
- Add to existing story (can see only last part)
 - Random
 - Search by title
- View stories you've added to (can see full story but can't add)

Additional Fxnality

- "News Feed"
 - View up to the last three stories you've edited (view-only)
 - Last 2 random stories and up to the last 3 stories you've edited
- Remove page
- Voting system (upvoting and downvoting)
- Comment threads on all stories
- Timestamp of the last submission
- View story without adding to it beforehand? (But once you choose this you can't add)
- Display which user contributed to which paragraph

Components

Landing Page

The landing page will display a register box and a login box. The register box will load the inputted credentials into the database and route back to the landing page, instructing the user to login. Once the correct credentials are inputted, a session is established and the Landing Page is converted into the Home Page (see below).

Home Page

Includes logout box, 'Create New Story' and 'Add to Story' buttons, and a list of links to all stories you have contributed to. Each link can be just the title of the story and will take you to a page that consists of the full story (These stories cannot be edited again). 'Create New Story' button takes you to the 'Create New Story' page. 'Add to story' button takes you to page where you can decide to search for a random story or search by title (see below).

Add to Story Page

(Only the last contribution to the story can be seen, and you can add with you own contribution)

Logout box

The logout box will appear at the top left corner of every page in the site. If the user is logged in, the box will display a welcome message and a logout button. Once the logout button is clicked, the Home Page will be replaced by the Landing Page and the user will be logged out.

Search Bar

The user can type in a query into the search bar; the app will then check the database for any valid hits, and will return those hits with links to their pages.

A "valid hit" may be defined as any row in the database whose title contains part or all of the search query.

Search Results

When the user submits a search query, they will be greeted with a results page. This will include a search bar at the top, pre-filled with their current query, and results of the search. Each of these will be a link to a page (this will be done through hyperlinking the title and then displaying it).

Individual Pages

When the user clicks on a specific result on a result page, they will be taken to the individual page of that result. The page will include a title and a button taking you back to the search results. If the user has already contributed to the page, they can view the whole story. If the user has not you can see the latest update to the story and the option to add to the story.

Create New Story

In order to add a page, the user has to be logged in. On the Add Page page, there will be a form with input/textarea fields for the title and the first paragraph to the story. When the form is submitted, it will be added to the database.

Add to Story

The user has to be logged-in in order to add to a story. The user can see the latest update and is presented with a form where they can add a paragraph to the story. When that form is submitted, the database will update to reflect the user's addition.

Delegations

Pair 1: Raunak Chowdhury (Project Manager) and Anton Danylenko

- Add stories
 - Randomly pick a story from the db
- Create stories
- Displaying stories in the component "View Story"

Pair 2: Joan Chirinos and Soojin Choi

- Login System
 - Home page

- Searching
- Landing Page
 - Story display
